Secure Mirrors
are ligature free
and resistant to
breakage..."*

DuraVision™ High Security Mirror

The new range of DuraVision™ High Security Anti-Ligature Mirrors are designed for use in Prisons, Hospitals, Mental Health Care and Behavioral Facilities and Municipal Toilets. The tamper proof PVC frame design is ligature free, resistant to breakage and easy to install. The mirror face is placed into the rebate from the back, then the ACM back is glued into its own rebate. This method allows the mirror face to float slightly, however once fixed to a flat wall, the mirror and backing are totally encapsulated and cannot be removed without destruction of the frame. Each mirror is placed in a plastic bag and individually boxed in a single cushion carton. Security Head Torx Screws or Rawl Spikes can be supplied as an optional extra.

FEATURES and BENEFITS

Available with an acrylic, polycarbonate or stainless steel mirror face.

Tamper proof encapsulating frame available in 3 sizes.

7mm anti-ligature counter-bore mounting holes.

ACM Back holds the mirror securely in place.

Recessed, tamper proof fixings increases security and reduces ligature risk.

PVC water resistant frame.

Tough, durable and built to last.
